NXP's MC33772 is a Li-Ion Battery Cell Controller IC designed for automotive and industrial applications such as 14 V Li-ion batteries, HEV, EV, ESS, UPS systems

This module provides overcharging, over discharging, short circuit, and also overcurrent draw protection to the Battery Pack. It also charges the battery in a ...

3S Battery Management System (BMS) circuit for lithium-ion batteries. The 3S configuration is a series connection of three cells, requiring a robust ...

Analog Devices offers a broad portfolio of battery charger IC devices for any rechargeable battery chemistry, including Li-Ion, LiFePO<sub>4</sub>, lead acid, and nickel-based, for both wired and wireless ...

MPS offers several different charger topologies for 3s applications depending on the input power source type and max charging current needed.

Learn how to choose the right Li-ion battery charging IC for your portable electronic device. Explore key factors such as charge current, voltage ...

Our battery charger ICs support 2, 3, and 4 battery devices, and have functions such as hybrid power boost (HPB) and narrow output voltage DC (NVDC). ...

This circuit is a battery management and charging system for a 2S lithium-ion battery pack, which powers multiple MG996R servos. The TP5100 module ...

BCPB2 is a highly reliable Lithium-Ion Battery E Charging, Protection, and Balancing Board that operates with wide input range, 5- 24V. This board able to charge the batteries from input voltages ...
