This work explores the factors that affect the energy storage reserve capacity of 5G base stations: communication volume of the base station, power consumption of the base station, backup time of ...

An outage is specifically identified for practical implementation when the reference signal received power falls below a threshold, typically ranging from - 120 to - 140 dBm, within the coverage area of base ...

The authors compare linear regression, gradient boosted trees, and artificial neural networks (ANNs) to model energy consumption using field data collected from 5G radio base stations.

In this paper, we closely examine the base station features and backup battery features from a 1.5-year dataset of a major cellular service provider, including 4,206 base stations distributed ...

Say there's a power outage during extreme weather or maintenance events. Cell ...

The map below depicts the most recent cities in the United States where AT& T users have reported problems and outages. If you are experiencing problems ...

Field data from operators shows that non-redundant 5G base stations experienced more than 12 brief outages per year during peak events, each lasting 1-3 seconds--enough to interrupt ...

This map automatically updates outage information every 5 minutes and shows ongoing and recently detected outages. You can use this map to quickly ...

Check if services are down based on real-time user reports. Downtetector shows live status updates and outages people are experiencing.
