This recommended practice (RP) provides principles, technical requirements, and guidance for design, and documentation of wind turbines in extreme temperatures.

All technical data is subject to change in line with ongoing technical development! This document is to be treated confidentially. It may only be made accessible to authorized persons. It may only be made ...

Enhanced Controls Technology The 1.85-87 wind turbine employs GE's patented Advanced Loads Control. This feature reduces loads on turbine components by measuring stresses and individually ...

Although EPA regulations have stabilized and are thought to be well understood, ever-increasing local requirements are changing the criticality of air permitting for engine-driven generator sets.

A confirmation of the generator manufacturer should be given for the temperature range within which switching on voltage is allowable (normal production operation), as well as the temperature range ...

A Type IV wind turbine is an AC generator in which the stator windings are connected to the power system through a fully-rated power-electronics converter. Both Type III and Type IV wind turbines ...

The tables that follow list the major federal and state laws, Executive Orders, and other compliance instruments that establish permits, approvals, or consultations that may apply to the construction and ...

Wind turbine heights within individual WECS projects are evaluated by the FAA for impacts to aviation safety and may be limited by the FAA.

We suggest residents and local officials take the following steps when drafting new zoning regulations or ordinances, and when they are approached about a wind farm near their community.
