Data from the National Energy System Operator shows that solar sites in the UK generated 7.6 terawatt hours (TWh) of electricity in the first five ...

So far, this year's solar electricity output in the UK has avoided gas imports of roughly \$813.9 million, which would have released approximately 6.61 million tons of carbon dioxide. Though this year's ...

Solar photovoltaics deployment table for June 2017 published. May 2017 solar photovoltaic deployment figures published Monthly deployment of all ...

The UK's solar farms and rooftops generated more electricity than ever before in the first five months of 2025, as the country enjoyed its sunniest spring on record.

Renewable energy - considered crucial to limiting climate change - produced a record amount of electricity in Great Britain in 2025, BBC analysis ...

Generation data for the first half of 2025 shows a record start for solar, while new government capacity data points to accelerating deployment and larger installations.

Solar power in Great Britain had a record-breaking start to 2025, with solar up 32%, to produce a record 9.91 TWh, breaking generation records for five months in a row since March 2025.

Solar power generation in Britain so far this year has surpassed the total for 2024 as panels are rapidly installed amid favourable weather, ...
