The power connection is internal to the UPS and uses self-aligning dagger pins that do not require any tools or actions from the operator to disconnect the battery drawer.

That initial surge happens regardless of the switch in the back, it happens everytime you turn on the PC. It's no big deal, the PSU was designed for it in normal usage.

You don't need to turn off the UPS and you don't have to unplug anything. I WILL find your ITX build thread, and I WILL recommend the Silverstone Sugo SG13B Primary PC:

So you can either a) let the Windows service turn the UPS off, or b) kill the service and turn the UPS off yourself. The UPS itself has a "grace period" after it gets the "S" command, giving you time to shut ...

Here's how to do it: 1. Plug your computer and other devices into the UPS. 2. Turn off all devices that are plugged into the UPS. 3. Disconnect the ...

So when I turn off my pc, after it turned off I flip the switch on my power supply so my lights won't stay on all the time. But is it bad for your pc's stability to turn off my...

If the PC or the load connected to it is turned off, it is best practice to turn off the UPS as well. Otherwise, in an event of a blackout, the UPS will transition to backup power even though ...

UPS is a critical power system during outages and if your critical load depends on it, you don't want any mistakes. Now, let us guide you through UPS power supply ...

Shutting down an Uninterruptible Power Supply (UPS) without impacting the IT load is crucial to avoid data loss or hardware damage. Here are ...
