The Chilean power utility Gasco is investing USD 71 million in three flat plate collector fields with a total capacity of 154 MW and will deliver heat for the ...

The Cerro Dominador project will see the construction and operation of a 110 MW concentrated solar power plant with storage in the northern Chilean region of Antofagasta, located in the Atacama Desert, one of the driest places with the highest solar radiation on earth. When finished, Cerro Dominador will be the largest CSP power plant with storage in Latin America. The facility will have a total aperture area ...

The solar thermal tower Cerro Dominador has become a symbol of Chile's energy revolution against climate change.

The Cerro Dominador thermosolar plant in Chile's Atacama Desert, a pioneer in Latin America, has been halted for over a year due to a ...

As shown in the previous sections, Chile has a large territory with great potential for the development of solar energy due to its high irradiation values. However, other factors must be taken into account ...

Chile has emerged as a global pioneer in adopting high-temperature heat storage systems, particularly for solar power plants. With its Atacama Desert boasting the highest solar radiation levels on Earth, ...

The first two phases of Oasis de Atacama, the largest solar power and energy storage project in Latin America, have come on stream in Chile's ...

In Chile, the solar thermal regulation DS331, which utilizes a global modeling approach, governs the deployment of solar thermal systems (STSS) across highly variable climatic zones.

As the first solar thermal power plant in Latin America, Cerro Dominador combines innovation, scale, and sustainability in one of the most ...
