I want to define a constant in C++ to be visible in several source files. I can imagine the following ways to define it in a header file: `#define GLOBAL_CONST_VAR 0xFF int GLOBAL_CONST_VAR = 0xFF;...`

207 Lets say I have one cell A1, which I want to keep constant in a calculation. For example, I want to calculate a value like this: $=(B1+4)/(A1)$ How do I make it so that if I drag that cell to make a ...

Symbolic Constant: When to replace? Magic: Unknown semantic Symbolic Constant -> Provides both correct semantic and correct context for use Semantic: The meaning or purpose of a thing. "Create a ...

uninitialized constant ActiveSupport::LoggerThreadSafeLevel::Logger (NameError) Asked 1 year, 1 month ago Modified 6 months ago Viewed 69k times

You can use an enum type in Java 5 and onwards for the purpose you have described. It is type safe. A is an instance variable. (If it has the static modifier, then it becomes a static variable.) ...

12 You can use a namedtuple as a workaround to effectively create a constant that works the same way as a static final variable in Java (a Java "constant"). As workarounds go, it's sort of ...

I want to use the PI constant and trigonometric functions in some C++ program. I get the trigonometric functions with `include <math.h>`. However, there doesn't seem to be a definition for ...
