-----

Next generation wind power requires equally innovative lubricants designed to maximize wind turbine performance and increase uptime. Shell's coolants are ...

Cooling is essential for wind turbine generators to maintain optimal operating temperatures and prevent overheating of critical components. Overheating can lead to reduced ...

The coolant should be serviced every three to five years - and only by specialists such as those at C& D, of course. We have developed technology to be able to change coolant in wind turbines quickly and ...

This paper aims to overview the cooling techniques in direct-drive generators for wind power application, based on generator size, reliability and ...

Free-standing Svendborg Brakes cooling system combines a pump, valve, motor manifold, converter, and heat exchanger installed on the top of the nacelle and ...

The GLYSANTIN® WIND ECO LOOP line represents the first certified recycled premium coolants approved for use in wind turbines. Over 99% of the MEG in these products is replaced with recycled ...

That's why we offer special oils and greases made just for wind turbines. Our products help reduce breakdowns, make parts last longer, and cut down on maintenance. With smart tools to track oil ...

Maximize wind turbine performance with Heatex's complete and customizable cooling systems for generator, nacelle and converter/ transformer cooling.

In order to ensure the secure and stable operation of wind turbine, effective cooling systems has to be implemented to these components. Since the early wind turbines had lower power capacity and ...
