Bratislava isn't just pretty - it's perfectly positioned. Nestled between Austria and Hungary, the city's large-scale energy storage acts as a "power sandwich" filling for Central Europe's renewable energy ...

In this report, we first introduce the policies guiding the energy sector development, and then we offer insights into the energy indicators and statistics related to energy sources composition, their sources ...

Today, the Slovak Republic is not on track to meet its draft 2030 emissions reductions target. The IEA commends the government of the Slovak Republic ...

Bratislava will focus on comprehensive building energy savings, reducing energy use by at least 35% overall. We will also install renewable energy sources (RES), which should cover 20% of the annual ...

Slovakia submitted a draft updated national energy and climate plan (NECP) in August 2023. The European Commission assessed it and made recommendations for the final NECP, overdue since ...

Bratislava's Climate Challenge shows how cities can partner with business on energy efficiency and renewables to cut emissions.

The energy transition is a source of great risk and great opportunity. Here is a selection of our research-backed insights on key developments.

Bratislava has high energy demand, especially due district heating, public transport, and urban infrastructure, and therefore Bratislava has prioritised initiatives aimed at decarbonisation, energy ...

Bratislava is redefining how cities and businesses can work together to tackle climate change. Through the Bratislava Mayor's Climate Challenge, the Slovak capital is showing that real ...
