---

The global energy storage market is poised to hit new heights yet again in 2025. Despite policy changes and uncertainty in the world's two largest ...

The International Energy Agency projects significant growth for photovoltaics (PV) in 2024 over the record-breaking year in 2023. Over the next ...

And solar PV takeover is accompanied by the timely meteoric rise of battery storage, which cumulative installed capacity likely overtook that of pumped hydro storage last year.

U.S. solar and energy storage are poised for significant growth in 2025. Explore the trends driving this transformation today!

The US added a record-breaking amount of energy storage in 2025, according to a new solar industry report published Monday. The growth of battery storage across the US is a rare ...

According to the February 2026 Electric Power Monthly report from the Energy Information Administration (EIA), the surge represents the largest single-year capacity addition in over two ...

The US Energy Information Administration (EIA) says that battery storage capacity grew by 13,809 MW in the past 12 months and is projected to expand by another 22,053 MW as solar ...

With the rise of solar and wind capacity in the United States, the demand for battery storage continues to increase. The Inflation Reduction Act ...

Solar energy is rapidly growing, transforming global power markets and accelerating the shift to sustainable energy. Discover the key insights.

# Explosive growth of photovoltaic energy storage

Solar, wind, and batteries are set to supply virtually all net new US generating capacity in 2026, according to EIA data reviewed by the SUN DAY Campaign, continuing their strong 2025 growth.
