---

China added almost 374 billion watts of renewable power -- three quarters of it from solar panels -- in 2024. That's more than eight times as much as the ...

China was responsible for installing a massive 256 GW of that solar capacity. For context, it took until September last year to pass the 350 GW ...

China's wind and solar energy capacity has surpassed that of mostly coal-powered thermal for the first time, the national energy body said Friday.

China, the world's biggest emitter of greenhouse gases, is building almost twice as much wind and solar capacity as every other country combined. ...

Solar panels, wind power and batteries: In just 15 years, China has risen to the top of the global clean energy industry, leaving European countries ...

The massive growth in wind and solar begs the question: why is China still building coal power plants and, by most analyses, way more than it actually needs? The answer is complicated.

China is expanding renewable energy exponentially while the U.S. is going backward. How China became the global leader, why the U.S. falling behind and what it means for these ...

In the 12 months to June 2025, wind and solar generated more electricity than hydro, nuclear, and bioenergy for the first time. Just four years ...

From west Africa's Sierra Leone and Liberia to Kiribati and Tonga in the Pacific, the impact from China's rising dominance as the world's first ...

## French media praises China s new solar power generation

China is building an enormous network of clean energy industries on the Tibetan Plateau, the world's highest. The intention is to harness the region's ...
