Function, in mathematics, an expression, rule, or law that defines a relationship between one variable (the independent variable) and another variable (the dependent variable). Functions are ...

The types of functions are defined on the basis of how they are mapped, what is their degree, what math concepts they belong to, etc. Learn the types of ...

Overview Multi-valued functions Definition Notation Other terms Specifying a function Representing a function General properties Several methods for specifying functions of real or complex variables start from a local definition of the function at a point or on a neighbourhood of a point, and then extend by continuity the function to a much larger domain. Frequently, for a starting point there are several possible starting values for the function. For example, in defining the square root as the inverse function of the square function...

function, office, duty, province mean the acts or operations expected of a person or thing. function implies a definite end or purpose or a particular kind of work. office is typically applied to the function ...

In this section we're going to make sure that you're familiar with functions and function notation. Both will appear in almost every section in a Calculus class so you will need to be able to ...

There are three different forms of representation of functions. The function needs to be represented to showcase the domain values and the ...

A solid understanding of the basics of functions, including the definition of a function, its notation, domain and range, and inverse function s, is essential for ...

The world's largest collection of formulas and graphics about more than 300,000 mathematical functions for the mathematics and science communities.
