Utility-scale solar power capacity in China reached more than 880 gigawatts (GW) in 2024, according to China's National Energy Administration. China has more utility-scale solar than ...

According to NEA data, China's total power generation capacity stood at 3.61 TW by the end of May 2025, reflecting an 18.8% rise from the prior year. Solar power led as the fastest-growing ...

Data released by China's National Agency last week revealed that the country's solar electric power generation capacity grew by a staggering 55.2 ...

Between January and April 2025, China had already added 104.9 GW of solar installations, including 45.2 GW in April alone, a 215 percent year ...

Hydropower accounted for 436 million kilowatts, wind power for 521 million kilowatts, solar power for 887 million kilowatts, and biomass power for 46 million kilowatts.

To put that in perspective, at that point the total electricity capacity of the planet-- not just solar, but nuclear, coal, gas, and renewable energy, all ...

China is leading the world in new solar and wind installations and doing so at a record-shattering pace. In May 2025 alone, the country added 93 ...

Discover all statistics and data on Solar energy in China now on statista !

China's installed power capacity hit 3.67 TW by July, with solar at 1.11 TW, wind at 570 GW, and renewables providing nearly one-quarter of generation. The National Energy Administration...
