The two primary power delivery challenges with 5G new radio (NR) are improving operational efficiency and maximizing sleep time. For example, ...

A literature review is presented on energy consumption and heat transfer in recent fifth-generation (5G) antennas in network base stations.

Focus Group Technical Report Summary This technical report explores how network energy saving technologies that have emerged since the 4G era, such as carrier shutdown, channel shutdown, ...

Huawei's MetaAAU, for example, allows base stations to achieve the same range with less transmit power and lower energy consumption by 30%. At the same time, Nokia's liquid cooling has ...

Abstract 5G base stations (BSs) are potential flexible resources for power systems due to their dynamic adjustable power consumption.

In today's 5G era, the energy efficiency (EE) of cellular base stations is crucial for sustainable communication. Recognizing this, Mobile Network Operators are actively prioritizing EE for both ...

Aiming at minimizing the base station (BS) energy consumption under low and medium load scenarios, the 3GPP recently completed a Release 18 study on energy savi
