IRENA's new report shows that after decades of falling costs and improving technology particularly for solar and wind, the socio-economic and ...

This chart vividly illustrates the impressive cost reductions across various renewable energy technologies over the past decade, placing wind and solar at the forefront of affordability.

Solar power and wind dominated again, as did China. The country contributed a stunning 63.8% in total, and 61.5% and 70.5% in the two ...

A new report from the International Renewable Energy Agency (IRENA) finds that in 2024, utility-scale solar PV generated electricity at an ...

June 15 (SeeNews) - Global average costs for solar and onshore wind electricity could fall by 59% and 26%, respectively over the next 10 years, the International ...

The levelised cost of electricity produced from most forms of renewable power continued to fall year-on-year in 2023, with solar PV leading the cost reductions, followed by offshore wind.

Renewables accounted for a record 92.5% of global power additions, largely due to significant growth in solar and wind power. Solar power alone accounted for over three-quarters of renewable additions, ...

It is a very detailed summary, in tabulated numbers, of the installed renewable power capacity across all countries, differentiated by renewable ...

The International Renewable Energy Agency (IRENA) has released its Renewable Power Generation Costs in 2024 report, confirming that ...

The IRENA's new report "Renewable Energy Power Generation Costs in 2024" states that 91% of renewable
