Standalone energy storage made up nearly 30 GWh of the new capacity added in 2025, while systems paired with solar accounted for 20 GWh. Residential storage grew substantially, ...

Needless to say, even with the potential headwinds of continued higher interest rates, there continues to be massive demand for solar and ...

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record growth in 2024 ...

Adding 19 GW of solar and 6.2 GW of storage since 2019 helped keep the lights on - an 800% increase in solar and 5,500% increase in battery ...

Driven by falling raw material costs, it has never been less expensive to add storage along with your solar system. Increased demand for storage is also linked to recent anti-net metering ...

Thinking of adding battery storage to your solar panels? Our 2025 guide covers outage protection, TOU rates, and incentives to help you make the ...

Despite policy headwinds earlier in the year, energy storage additions in China and the US are set to continue growing this decade. The ...

Growth of enabling energy infrastructure like storage could make a big difference in meeting the level of renewable energy needed.

Multiple clean energy megatrends are converging: exponential growth in deployed solar and storage capacity, along with a rapid drop in ...
