On a blustery day, wind turbines will be turning and generating lots of lovely clean power. In summer 2016 the Met Office issued a yellow weather ...

Here, we combine an analysis of the three key parts of the future power system affected by weather - wind generation, PV generation and demand - and do so for a period of 25 years with ...

The team found that power generated at a set wind speed is higher under stable conditions and lower under strongly unsteady conditions at that location. The ...

Electricity can be generated from wind energy on windy days through the use of wind turbines. When the wind blows, it causes the blades of the turbine to spin, which in turn rotates a generator to produce ...

On sunny and windy days, renewable energy satisfies close to 70% of Germany's demand. But on several cloudy and nearly windless days, solar ...

Wind turbines are capable of generating electricity 24/7, but the amount of power they produce can vary depending on the time of day and the ...

MidAmerican Energy says over 80% of energy that its customers use is renewable. With a windy day like Monday, when winds gust between 30 and 45 mph, it's ...

Basically, our entire nation's future electricity supply depends on the Goldilocks theory - not too windy, not too still, just right. Most people have no idea how crazy this stuff is.

Wind farms are just one part of an electrical system that needs to be controlled and supervised throughout the day. The electricity produced in wind farms needs to be transported to the ...

Is there electricity generated on windy days

Curious about how wind turbines work when there's no wind? This article explains how turbines generate electricity, even when it's not windy outside!
