The figures for 2024 reveal Asia's critical role in the global renewable energy transition. While China, India, and Japan lead the way ...

This study explores the growth of solar power in seven key Asian countries, the potential for future growth and the avoided fossil fuel costs due to solar electricity generation ...

There is currently a total of 222GW of announced, pre-construction and construction-stage utility-scale wind and solar capacity ...

Asia's growing energy demand has often been framed through the lens of its coal, gas or nuclear dependence, but solar power is growing rapidly ...

This report provides a comprehensive assessment of the readiness of Southeast Asia's power sector to integrate higher shares of ...

We spotlight the top 7 solar energy projects in the Asia-Pacific region that are making significant strides in ...

Renewable energy in Afghanistan is seeing significant growth and development, tapping into the country's rich natural resources. The country's hydroelectric potential is notably high, with rivers capable of producing an estimated 23,000 MW of power. Currently, hydropower installations include both large-scale plants and smaller micro-hydropower schemes, cumulatively amounting to approxima...

The global energy landscape is experiencing a seismic shift. Since 2021, electricity generation from coal and gas has remained ...

Data and analysis including a list of solar power in every country in the world, countries with the most solar power, and countries that ...
