The IEA PVPS Trends in Photovoltaic Applications 2025 report provides comprehensive data and analysis on global PV deployment, technology, and ...

Solar accounted for 58% of all new electricity-generating capacity added to the US grid through the third quarter of 2025, with more than 30 GW installed. Solar and storage, combined, ...

Low module costs, relatively efficient permitting processes and broad social acceptance drive the acceleration in solar PV adoption. Distributed ...

Find up-to-date statistics and facts on the global solar photovoltaic industry.

Based on the Solar Energy Innovation Map, the TreeMap below illustrates the impact of the Top 9 Solar Energy Trends for 2025. The rise of ...

Renewable energy statistics 2025 provides datasets on power-generation capacity for 2015-2024, actual power generation for 2015-2023 and renewable energy balances for over 150 countries and areas for ...

Explore the future of solar in 2025--key trends, new tech, and policies driving global clean energy growth.

In 2024, solar represented 13.7% of net summer capacity and 6.9% of annual generation. EIA projects that PV's growth in 2023 (27 GWac) and 2024 (36 GWac) will continue in ...

Almost 70 gigawatts (GW) of new solar generating capacity projects are scheduled to come online in 2026 and 2027, which represents a 49% increase in U.S. solar operating capacity ...

This dataset contains yearly electricity generation, capacity, emissions, import and demand data for over 200 geographies. You can find ...
