All this in a one-stop solution from a single-source partner. We've successfully delivered more than 1,000 E-House solutions worldwide over the last 15 years.

Download the brochure to explore the concept of a smart substation and how organizations can harness this new asset to modernize the grid, tackle the ...

An internal lithium battery, a highly efficient solar panel, intelligent adaptive energy control and robust construction come together to provide unparalleled performance and reliability. 300%* longer lasting, ...

Offering modular intelligent prefabricated cabin solutions, it simplifies substation construction processes, achieves high flexibility and integrated services, significantly shortens project investment and ...

Ideal for smart grid projects, this modular intelligent prefabricated cabin substation features customizable layouts for different voltage requirements while minimizing on-site work. Its prefabricated design ...

The modules contain all components for a complete substation, from the power transformer and AIS or GIS switchgear to medium- and high-voltage cables, protection, monitoring and control systems, and ...

A new generation of intelligent stations is divided into equipment layer and station control layer. The data collected by the electronic transformers are directly uploaded to the server.

Key features include intelligent equipment inspection, perimeter security monitoring, and remote expert collaboration, providing comprehensive technical support for ...

Ideal for smart grid projects, this modular intelligent prefabricated cabin substation features customizable layouts for different voltage requirements while minimizing on-site work.

The Project includes constructing a new, approximately 21-mile, 138-kV transmission line, upgrading the

Lima I cabine intelligent pv substation

existing Princeton substation, and building a new switching station called Lima located near Peru.
