At Boldrocchi Group, we specialize in designing and delivering custom-engineered air intake systems for gas turbines, offering solutions that ensure clean air flow, ...

The aerodynamic noise of air intake system is one of the main noise sources of a gas turbine power plant. In this study, large eddy simulation in conjunction with acoustic finite element ...

A gas turbine compressor acts like a very effective air filter in that it collects and deposits a significant percentage of any solids that are carried by the ambient air and are ingested into the gas turbine inlet.

The GRV conical filter cartridges are especially designed to meet the high demands of gas turbine air filtration systems. The special filtration media provides maximum protection for the turbine.

Power plants for generating electricity near deserts are frequently subjected to special environmental conditions, such as high dust loads from desert storms or ...

The turbine takes in large quantities of air that may contain substances or objects that can harm it. Also, the large amount of air used by a GTE requires large intake and exhaust ducting, which takes up ...

Customers around the world trust Dür Universal's combustion turbine filtration systems to clean and condition inlet air for power generators in both onshore ...

Donaldson is a leading supplier of engineered air intake systems for gas turbines and industrial compressors, for both new and retrofit applications.

When open, inlet air bypasses clogged moisture separators and provides unfiltered air to the engine to prevent engine air starvation. These doors operate ...
