In this paper, a distributed economic dispatch scheme considering power limit is proposed to minimize the total active power generation cost in a ...

This work compares the performance of three optimization methods for solving the economic dispatch problem (EDP) in microgrids with energy storage systems (ESSs).

The economic dispatch problem (EDP) of micro-grids operating in both grid-connected and isolated modes within an energy internet framework is addressed in this paper.

With the rapid advancement of microgrid technology, more emphasis has been placed on maintaining the microgrids' long-term economic feasibility while ensuring security and stability.

To enhance the reliability of distributed power generation and facilitate its efficient integration with the power grid, microgrid technology has been identified as an ...

This study presents a comprehensive analysis of economic dispatch and optimal power flow in microgrid systems, address-ing both single-bus and three-bus grid-tied configurations.

Cyber security of microgrids attracts increasing attention since the relatively open communication network of the microgrids is vulnerable to hacker attacks. This study proposes a real ...

This paper investigates the economic dispatch (ED) problem of multi-microgrids considering the flexible loads based on distributed consensus algorithm.

Building upon these foundations, this study develops a bi-level robust optimization model for MMG economic dispatch to optimize the energy management system of microgrids under the ...
