This report summarizes the attributes of the various assets that will be used in Pacific Northwest National Laboratory's (PNNL's) Integrated Renewable Energy System (IRES) microgrid project.

The Net-Zero Microgrid Program provides cross-cutting research to accelerate the use of renewable and zero-carbon generation in microgrids.

This report describes detailed lessons learned, from up-front planning guidance to actionable interconnection recommendations. Based on the experiences with these seven projects, the ...

This task included the development of a microgrid demonstration and training system with associated curriculum to be used for STEM and microgrid program outreach to communities.

This project will provide insight, transparency, and standardization in the reporting of microgrid costs and identify market segment differences for future cost reductions across microgrid ...

The key to connecting the two microgrids is a microgrid master controller that has been developed and demonstrated with a \$1.2 million grant from the DOE in partnership with a number of universities, ...

Develop a framework for dynamic formation of networked microgrids for optimized operations under both normal and emergency conditions. This project.

Microgrid controller RCP and testing. Demonstration of the performance of both switching and average microgrid controller components in the Microgrid Library etc. The Typhoon HIL toolchain offers ...

Currently, every country in the world is constructing microgrid experimental platforms and demonstration projects, and vigorously researching and applying microgrids.
