---

This project features a 3.2 kW solar PV system + 5 kW/9.6 kWh battery storage + 5 kVA diesel generator at a campsite in the Namibian Kalahari Desert. The hybrid microgrid provides reliable, 24/7 ...

The study contributes to advancing renewable microgrids, focusing on the technical, economic, and environmental aspects of energy systems for remote and rural areas.

Microgrids with hybrid energy sources comprising photovoltaic (PV), wind turbine (WT), battery energy storage system (BESS) and diesel generator ...

Surplus electricity from RE generation as well as cheaper electricity imports from the Southern African Power Pool (SAPP) can be stored in the BESS. The stored energy could supply customers during ...

The main components of this system include the PV array, ESS storage cabinet, and diesel generator. The operational principle emphasizes real-time monitoring and intelligent coordination to maximize ...

Our solutions fully integrate all components of a microgrid, including battery energy storage systems (BESS), diesel and natural gas generator sets, hydrogen technologies, renewable energy sources, ...

In this paper, we present contributions to the modeling of HESs containing BESSs, renewables, and diesel generation using a mixed-integer quadratic programming (MIQP) approach.
