Explore how energy storage growth is driving demand for battery materials, copper, aluminium, and vanadium in the clean energy transition.

Two-thirds of all utility scale energy storage capacity installed in 2025 was built in states won by President Donald Trump, including 9 of the top 15 states for new installations.

Global demand for energy storage is surging. Lithium-ion leads today, but new contenders like sodium-ion, flow, and gravity systems are ...

The residential energy storage sector added 3.1 GWh in 2025, marking a 51% year over year increase. Expansion of virtual power plant programs in states like Massachusetts, Texas, ...

This growth highlights the importance of battery storage when used with renewable energy, helping to balance supply and demand and improve grid stability. Energy storage systems ...

Emphasising the pivotal role of large-scale energy storage technologies, the study provides a comprehensive overview, comparison, and ...

A boom in battery storage has bolstered the demand outlook for lithium in 2026, driving hopes for an accelerated turnaround for an industry ...

Renewable energy integration and decarbonization of world energy systems are made possible by the use of energy storage technologies. As a result, it provides significant benefits with ...

The global energy storage market is poised to hit new heights yet again in 2025. Despite policy changes and uncertainty in the world's two largest markets, the US and China, the sector ...
