This paper addresses the energy management control problem of solar power generation system by using the data-driven method.

In this paper, the DC micro-grid consists of solar photovoltaic and fuel cell for power generation, proposes a hybrid energy storage system that includes a supercapacitor and lithium-ion ...

A detailed analysis of the two control laws is presented. The superiority and efficacy of the proposed control strategies are validated on the DC microgrid system during different operating conditions by ...

Consequently, the implementation of an energy storage system is essential to address these challenges. This study presents a novel energy management technique (EMT) for hybrid energy...

This work proposes a novel power management strategy (PMS) by using hybrid artificial neural networks (ANNs) based model predictive control (MPC) for DC microgrids (DCMG) with hybrid ...

An efficient energy management structure is essential for a DC Microgrid with a PV system combined with a Hybrid Energy Storage System (HESS) of Battery and Supercapacitor. The combined ...

This paper introduces an improved decentralized control strategy for a photovoltaic (PV) hybrid energy storage (HES) system (HESS) in a DC microgrid. The power sharing method of the ...

In this paper, a coordination control strategy is proposed for the DC micro-grid containing PV array, battery, fuel cell and proton exchange membrane (PEM) electrolyzer. For electrolytic cell, ...

In order to solve the existing problems, the paper proposes a Virtual DC Generator (VDG) control strategy based on the traditional double closed-loop control strategy in the hybrid energy storage ...

Abstract - This paper presents an in-depth study on the integrated energy management of a DC microgrid

PV-DC microgrid hybrid energy storage

system that synergistically combines Photovoltaic (PV) arrays, Proton Exchange ...
