Under the new rules, first-category consumers with connected capacity up to 5 kW - excluding Dushanbe - including industrial and non-industrial facilities, will face complete power ...

At about 11:10 a.m. on March 1, an accident occurred in the country's power grid and left most of Tajikistan's population without electricity. In addition ...

Kyrgyzstan and Tajikistan are facing an energy crisis as water levels have plummeted at the reservoirs powering their largest hydropower stations, officials said this week. The two ...

Unconfirmed reports suggested a possible incident at the Nurek hydroelectric power plant, a vital contributor to the country's energy needs. ...

Tajikistan has initiated its winter electricity rationing earlier than usual, citing reduced hydroelectric output due to lower river flows. This move aims to manage energy shortages amid ...

Electricity rationing in Tajikistan typically begins in mid-autumn and continues through spring. However, in the past two years, restrictions have started earlier, as soon as September.

The main cause of the power shortages is the reduced water level in the Nurek Reservoir, which powers the Nurek HPP, supplying around 50-70% of Tajikistan's electricity.

Electricity shortages remain a major problem in Tajikistan. Residents in the regions complain that power is only available for up to four hours a day.

Tajikistan is introducing additional restrictions on electricity supply as the country has grappled with shortages since late September due to low ...
