From 2016 to 2022, PV has seen an annual capacity and production growth rate of around 26%, doubling approximately every three years.

The subset of respondents now must report monthly accounts for about 90% of photovoltaic (PV) activity in the United States, based on 2021 data. Data collected on both the ...

Of the total solar capacity installed in the U.S., over 26 percent corresponds to residential installations. This segment has grown in recent years, ...

For the figure on the left, the percentages were calculated by comparing 2022 PV adopters to all households in their respective state (*or county, in the case of home values).

Summary: This article explores the growing role of photovoltaic panels across industries, backed by installation data and efficiency trends. Learn how solar adoption is reshaping energy strategies ...

Photovoltaic (PV) solar accounted for 58% of all new electricity-generating capacity additions through the third quarter of 2025, remaining the dominant form of new electricity-generating ...

High commodity prices and supply chain bottlenecks led to an increase of around 20% in solar panel prices over the last year. These challenges have resulted in delays in solar panel deliveries across ...

Asia Pacific held the largest market share of over 54.0% in 2023. Based on technology, the thin-film segment occupied a dominant market share of over ...

Analyst projections suggest about 460 GWdc of PV were installed globally in 2024, up 14% from 2023--China, alone, installed more than 270 GWdc. More than 500 GWdc of PV are ...

Proportion of purchasing photovoltaic panels

At least 67% of current owners are considering expanding or upgrading their solar systems. Over 82% of owners would recommend solar ...
