Learn how to replace all line breaks in a string with `&lt;br&gt;` elements using JavaScript on Stack Overflow.

Given a string: `string = "Test abc test test abc test test test abc test test abc"`; This seems to only remove the first occurrence of abc in the string above: `string = string.replace("ab...`

160 If you want to replace multiple characters you can call the `String.prototype.replace()` with the replacement argument being a function that gets called for each match. All you need is an object ...

The `string.replace()` is deprecated on python 3.x. What is the new way of doing this?

0 You can use the following function to replace Character or String at a particular position of a String. To replace all the following match cases use `String.prototype.replaceAllMatches()` function.

What's the difference between `java.lang.String`'s `replace()` and `replaceAll()` methods, other than the latter uses regex? For simple substitutions like, replace . with /, is there any difference?

7 This function uses both the `str.replace()` and `replaceAll()` functions. It will replace all occurrences of pattern in string with repl in a case-insensitive way.

ECMAScript 2021 has added a new String function `replaceAll`. A long time ago in a galaxy not so far away, people used `split + join` or regular expressions to replace all occurrences of a string. I ...

`var r = "Inamhere"; var s = r.replace("n", " ");` The statements are indeed correct and will replace one instance of the character n. It uses a different algorithm. When giving a String to replace it will look ...
