The goal of this article is the experimental validation of a gray-box equivalent modeling approach applied to microgrids. The main objective of the equivalent modeling is to represent the dynamic response of ...

This paper presented a DNN-based dynamic equivalent model (DEM) for frequency stability analysis of high-penetration IBR microgrids. Our model advances prior work in three key areas.

Considering the future integration of grids and MGs to form broad integrated networks, a discussion is presented of the use of phasor vis-à-vis electromagnetic transient simulation tools for MG dynamic ...

To build dynamic model when microgrid is a black-box system, a gated recurrent unit based neural network is proposed in this paper. The proposed neural network can be treated as a ...

Therefore, this study proposes a method to construct the equivalent model of a microgrid system and identify the parameters directly online. First, ...

We simulate the implementation of microgrids with PV generation using Alternating Current Optimal Power Flow (AC-OPF). The results of this thesis show the limits of feasible reactive power support ...

To address the intricate nonlinear optimization challenge at hand, we employ an evolutionary algorithm named the "Dandelion Algorithm" (DA). A rigorous comparative study is ...

Due to the complex structure of microgrids, there is currently a lack of an orderly modeling framework. This article proposes a dynamic equivalent modeling method.

Focusing on microgrid power forecasting techniques, including wind energy and PV power forecasting and load forecasting, the contributions and ...

Research status of microgrid equivalent modeling
