Reykjavik battery research and development

Interested in carrying out research that can contribute to a competitive and sustainable battery value chain? Swedish Energy Agency"s research program on the Sustainable Battery Value ...

Discover how cutting-edge battery processing technology in Reykjavik addresses renewable energy challenges while exploring industry trends and innovative solutions shaping the energy storage sector.

RISE has extensive research and development activities in the battery area. Our resources cover the entire value chain, from material to product and from use to second life.

VTT Technical Research Centre of Finland has conducted measurements on the properties of Donut Lab"s battery in its research laboratory.

Although Norwegian companies are at the forefront of next generation battery technologies, the successful battery manufacturers will not be the ones with the newest and most complex battery ...

The Northvolt Sweden acquisition includes 16 GWh of existing battery manufacturing capacity, more than 160 hectares of land, infrastructure and buildings to support expanded ...

Each section below categorizes specific areas of research, featuring highlighted student theses that demonstrate the practical applications and outcomes of our ...

This encompasses tasks such as engineering and providing support for permitting and regulatory compliance. Alor collaborates with the University of Iceland and Netpartar, an environmentally ...

It also includes what Lyten says is the largest and most advanced battery research and development center in Europe. A new industrial hub in northern Sweden
