Solar and wind accounted for 91% of new US electrical generating capacity added in the H1 2025, according to data just released by the Federal ...

Renewable energy statistics 2025 provides datasets on power-generation capacity for 2015-2024, actual power generation for 2015-2023 and renewable energy balances for over 150 countries and areas for ...

Renewable sources--wind, solar, hydro, biomass, and geothermal--accounted for 22% of generation, or 874 billion kWh, last year. ...

Wind And Solar generates 15.3% of global electricity worldwide. Compare Wind And Solar power generation by country with 2024 data and environmental impact.

For solar PV, wind and bioenergy for power, deployment has been revised downwards. Solar PV accounts for over 70% of the absolute reduction, mainly from utility-scale projects, while offshore ...

Weight of solar and wind in electricity production data. Data for solar and wind renewable energies in electricity production available in a map and excel file by country level.

A new analysis of solar and wind power shows its generation worldwide has outpaced electricity demand this year.

The review comprehensively examines hybrid renewable energy systems that combine solar and wind energy technologies, focusing on their current challenges, opportunities, and policy ...

(Bloomberg) -- China's solar power generation overtook wind for the first time last year as a boom in cheap panels continues to reshape the country's grid and climate trajectory. The nation ...
