In 2024, solar represented 13.7% of net summer capacity and 6.9% of annual generation. EIA projects that PV's growth in 2023 (27 GWac) and 2024 (36 GWac) will continue in ...

Solar PV accounts for almost 80% of the global increase, followed by wind, hydropower, bioenergy and geothermal. In more than 80% of countries ...

2025 has been a challenging year for renewables. The new tax law, commonly referred to as the One Big Beautiful Bill Act, rolled back many clean energy tax credits and imposed new restrictions, ...

Overall, our five-year utility-scale solar outlook remained virtually unchanged from our Q3 outlook. However, additional permitting risk remains for projects sited on private lands, given the ...

Module efficiencies continue to improve, with n-type technologies now representing 70% of global production. Bifacial modules dominate the market, making up ...

In our latest Short-Term Energy Outlook (STEO), we expect U.S. electricity generation will grow by 1.1% in 2026 and by 2.6% in 2027, when it reaches an annual total of 4,423 BkWh.

Solar experienced the fastest growth among all power generation technologies in terms of electricity output, three times as much as wind power, which was ranked second.

Policymakers in some of the world's largest economies are reducing support for solar power generation. Even so, Goldman Sachs Research expects ...

How efficient are solar panels today? Explore the latest trends, stats, and innovations in solar power generation.

Solar panel power generation efficiency outlook

Discover how 2025 solar panel efficiency trends are doubling energy output. Explore NREL breakthroughs, market data, and future tech. Click for expert analysis!
