systemsEtymologyHistorySolar cellsPerformance and degradationEconomicsGrowthOverall the
manufacturing process of creating solar photovoltaics is simple in that it does not require the culmination of
many complex or moving parts. Because of the solid-state nature of PV systems, they often have relatively
long lifetimes, anywhere from 10 to 30 years. To increase the electrical output of a PV system, the
manufacturer must simply add more photovoltaic components. Because of this, economies of scale are
important for manufacturers as costs decrease with increasing output.
```

PV cells are electrically connected in a packaged, weather-tight PV panel (sometimes called a module). PV panels vary in size and in the amount of electricity they can produce.

Solar panels can lower your electricity bill by 75% or more, but the ...
