-----

Switzerland is on the right track despite not reaching the steady-state rate. The extraordinary rhythm of new installation of the last years (more than 40% increase each year) has faded in 2025.

Switzerland's solar energy market size for photovoltaic systems reached a record 9.67 GW in 2025, equivalent to 100% of capacity, and is ...

Blackridge Research's Switzerland Solar Power Market Outlook report provides comprehensive market analysis on the historical development, the current state of solar PV installation scenario, its outlook ...

Swissolar's "Solar Monitor 2025" report projects annual PV additions of about 1.5 GW through 2027 and urges policymakers to sustain steady growth amid policy uncertainty and lower tariffs.

The Switzerland solar energy market forecast further projects an increasing demand for customized and integrated solar solutions, which is expected to drive competition across residential, commercial, and ...

Switzerland's solar energy market exhibits regional variations in terms of solar installations, policies, and market maturity. The regions with higher solar ...

Why are solar panels becoming more popular in Switzerland? The solar photovoltaic (PV) based solar panels represent the largest segment of the Swiss solar energy market due to the increasing ...

The potential of solar PV is very large across the entire country with considerable expansion potential for the future (Figure 2). For this reason, solar PV is considered a key technology for reaching ...

Overview  
Opposition  
Solar production  
Feed-in tariffs 2009 (KEV)  
Energy Act 2017  
In 2022, Switzerland derived 6% of its electricity from solar power. Studies show that installing solar panels on mountaintops in the Swiss Alps could produce at least 16 terawatt-hours (TWh) a year, approaching half of the nation's 2050 solar energy target. Typically, solar panels in Switzerland are mounted on existing infrastructure like mountain huts,

# Solar power prospects in Switzerland

ski lifts, and dams, with larger-scale installations in the Alps remaining rare.

Explore the solar photovoltaic (PV) potential across 242 locations in Switzerland, from Merishausen to Chiasso. We have utilized empirical solar and ...
