Weight of solar and wind in electricity production data. Data for solar and wind renewable energies in electricity production available in a map and excel file by country level.

Wind and solar generation has grown from a combined 774TWh in 2013 to nearly 4,000TWh in 2023 - more than quintupling in a decade. ...

Wind energy was the source of about 10% of total U.S. utility-scale electricity generation and accounted for 48% of the electricity generation from renewable sources in 2023.

About this data Share of electricity generated by solar and wind power Measured as a percentage of total electricity produced in the country or ...

While the contribution of solar energy to global electricity production remains generally low at 3.6%, it has firmly established itself among other renewable energy technologies, comprising ...

A review by the SUN DAY Campaign of data just released by the US Energy Information Administration (EIA) reveals that the mix of renewable energy sources provided nearly 26% of US ...

Wind And Solar generates 15.3% of global electricity worldwide. Compare Wind And Solar power generation by country with 2024 data and environmental impact.

A key aspect of this report is a first-ever global stocktake of VRE integration measures across 50 power systems, which account for nearly 90% of global solar PV and wind power generation.

In 2024 solar power grew 27% and wind power grew 8% compared to 2023 levels. California and Texas led in solar power. Together, these two ...

The proportion of wind and photovoltaic power generation

Total renewable generation capacity is 32,925 MW (37.5 percent) with 20,871 MW (24 percent) from solar and 6,284 MW (7 percent) from wind.
