BYD, the second largest producer, began construction of its first sodium-ion battery plant in January 2024, targeting applications in electric vehicles, grid-scale storage and industry.

When Germany's Sonnen partnered with Tokyo Electric Power Company (TEPCO) last year, they didn't just bring sodium-ion storage for EV charging stations - they created an energy symphony.

In September, Blackrock-owned developer Akaysha Power and major Japanese conglomerate Itochu entered a strategic alliance agreement to develop utility-scale energy storage in Japan, Sumitomo ...

Researchers at the Tokyo University of Science have unveiled a promising breakthrough in sodium-ion battery technology, demonstrating that ...

Tokyo's new large-scale energy storage project is set to begin construction in Q1 2025, marking Japan's most ambitious battery storage initiative to date. This renewable energy solution aims to address ...

This is a list of energy storage power plants worldwide, other than pumped hydro storage. Many individual energy storage plants augment electrical grids by ...

Supercomputer-based simulations reveal the intricacies of sodium-ion clustering and transport in hard carbon nano-pores, report researchers from Science Tokyo.

Large-scale projects, such as the 100MW/200MWh sodium-ion storage station recently completed in China, demonstrate that grid-scale storage is where SIBs truly shine.

From battery chemistry to smart grid integration, Tokyo's energy storage success story offers valuable lessons for cities worldwide. As storage costs continue falling (42% since 2018), these technologies ...

Tokyo Sodium Ion Energy Storage Power Station

Going forward, the plan is to launch the first energy storage station around fiscal 2025, and then proceed with the development and operation of energy storage stations one after another.
