A review by the SUN DAY Campaign of data just released by the U.S. Energy Information Administration (EIA) reveals that the mix of renewable energy sources provided nearly 26% of U.S. electrical ...

In 2025, we expect 7.7 GW of wind capacity to be added to the U.S. grid. Last year, only 5.1 GW was added, the smallest wind capacity addition since 2014. Texas, Wyoming, and Massachusetts will ...

Data on renewable power capacity represents the maximum net generating capacity of power plants and other installations that use renewable energy sources to produce electricity.

The combined capacity at pre-construction and announced stages for utility-scale solar power reaches 387 GW and 336 GW for wind. This includes ...

In South Africa and Pakistan, for instance, uptake in commercial and large-scale off-grid solar PV systems is rising rapidly, improving electricity access. Compared with 2019-2024, our forecast ...

Solar and wind accounted for 91% of new US electrical generating capacity added in the H1 2025, according to data just released by the Federal ...

Wind, nuclear, hydro, and solar together account for more than one-third of capacity. 468,582 MW of new generation capacity is under development in the United States, which is comparable to the total ...

The renewable power capacity data represents the maximum net generating capacity of power plants and other installations that use renewable ...

As shown in Fig. 1, by 2050, solar PV technology is projected to have the largest installed capacity (8519 GW), making it the second most prominent generation source behind wind power, ...

Total installed capacity of wind and photovoltaic power generation
