UL 9540A, the Test Method for Evaluating Thermal Runaway Fire Propagation in Battery Energy Storage Systems (BESS), is a binational standard for both the U.S. and Canada that assesses a ...

UL9540A is intended to provide technical information on ESS behavior under thermal runaway. Testing is conducted at the cell, module, unit, and (if needed) system levels. UL9540A provides needed ...

The cost to purchase this Standard varies depending on whether you are ordering a hardcopy, PDF or combination of the two. We also offer two different types of subscriptions: a one ...

The standard provides a systematic evaluation of thermal runaway and propagation in energy storage systems at cell, module, unit, and installation levels. The data from the testing enables the design fire ...

Standalone to provide energy for local loads Parallel with an electric power system/electric utility grid Able to perform multiple operation modes For use in utility-interactive applications in compliance with ...

"The information from UL 9540A testing supports important safety decisions about how the BESS will be installed and used. The best way for ...

The Sustainable Energy Action Committee's (SEAC) Energy Storage Systems (ESS) Standards Working Group has developed this informational bulletin to provide a high-level overview of the ...

UL 9540A is a testing procedure that evaluates and documents the fire performance of stationary ESS and was introduced as a compulsory requirement for all residential systems intended for installation ...

What is the UL9540A Test Method? The UL9540A test method evaluates the fire characteristics of a BESS that undergoes thermal runaway. Testing consists of up to four test levels, ...
