The Global Wind Power Tracker (GWPT) is a worldwide dataset of utility-scale, on and offshore wind facilities. It includes wind farm phases with capacities of 10 ...

China achieved a new milestone in its energy transition, with wind and solar power together generating a quarter (26%) of the country's electricity in April 2025, the highest monthly ...

Denmark (47.9%) generated the most wind energy as a percentage of its overall consumption in 2021. Ireland (32.7%) and Uruguay (32.3%) were ...

According to the most recent monthly wind production data from the EIA, Texas produced 27.1% of the nation's wind energy, more than double the amount from Iowa, the next highest ...

Here is the list of world's leading renewable energy generating countries in the world. 1. China is a global leader in wind energy generation. The ...

China is the largest producer of wind power in the world, having generated 466.5 terawatt hours (TWh) of wind power in 2021, more than 29% of the global total ...

In 2023, about 10% (425 billion kilowatthours) of total U.S. utility-scale electricity generation was from wind energy projects in 41 states. 1 The five states with the most electricity ...

About this data Share of electricity generated by wind power Measured as a percentage of total electricity produced in the country or region.

China is the world leader in wind energy, with over one-quarter of the world's wind power capacity. The country has the world's largest onshore ...

As of 2023, Europe had a total installed wind capacity of 255 gigawatts (GW). In 2017, a total of 15,680 MW

Where is most wind power generated

of wind power was installed, representing 55% of all new power capacity, and the wind power generated 336 TWh of electricity, enough to supply 11.6% of the EU's electricity consumption. In Q4 2023, wind power exceeded coal in European electricity generation for the first...
