Like traditional power plants, solar farms can produce enough electricity to power many homes and businesses in a specific grid. However, ...

In the U.S., community solar power projects could bring green energy to millions--but utility companies have been blocking the way.

California has the third highest residential electricity prices in the country at almost 30 cents per kilowatt hour and they are rising, so one would ...

Across America's power grid, there's a growing gap between what we need and what we'll allow. As the planet warms and climate disasters grow more costly, the U.S. has set a target to reach ...

The California Independent System Operator (CAISO), the grid operator for most of the state, is increasingly curtailing solar- and wind-powered electricity generation as it balances supply ...

Without solar and storage, new electricity supply cannot keep up with demand. Development timelines for new gas, coal, and nuclear plants are simply too slow to meet these new ...

Wind, solar power face a common foe -- creative local governments We calculated restrictions on wind and solar energy projects by looking at the restrictions states and counties ...

The technology to generate electricity with renewable resources like wind and solar has existed for decades. So why isn't the electric grid already ...

View data on DC ties, generation outages, resource plan details and scheduled generation, and find forms to submit generation and outage data/requests.
