Wondering why some wind turbines aren't spinning? Discover the real reasons turbines stop or appear stationary, how they work, and ...

When wind flows across the blade, the air pressure on one side of the blade decreases. The difference in air pressure across the two sides of the ...

We dug around in some state, federal and industry reports ...

We will explain why we see wind turbines stopped even though there is enough wind to generate electricity.

There are several possible reasons why a turbine may be still even when the wind is blowing, says Giri Venkataramanan, a professor of electrical and computer engineering at ...

Wind turbines stop turning for two reasons. First, the mechanical aspect of the wind turbine needs maintenance. Second, there isn't enough wind for ...

Discover why wind turbines sometimes stand still. Learn about wind speed, maintenance, safety, and innovations shaping the future of wind energy.

Wind turbines need to reach a certain starting wind speed to overcome mechanical resistance and begin rotating to generate ...

It looks like you have it nestled in an area where it doesn't actually get much wind, or where the wind is so turbulent, it never drives the turbine. They need to be installed at least ...

Encountering issues with your turbine? This guide provides solutions to common problems and helps you keep your wind turbine running smoothly.
