Only states with total capacity over 0.1 GW are included per year. Find out more about the data by reading the Wind Vision Report. You can download the data ...

Annual US power generation from wind turbines declined in 2023 for the first time since the mid-1990s - here's why.

Wind power generation, 2025 Annual electricity generation from wind is measured in terawatt-hours (TWh) per year. This includes both onshore ...

The industry is poised to add its second terawatt of capacity by 2030 - accomplished in just seven years compared to the 23 years it took to reach ...

Solar and wind energy will lead the growth in U.S. power generation for at least the next two years, according to EIA estimates. This report uses data ...

OverviewCommercialization of wind powerHistoryEconomicsNational trendsWind power by stateOffshore wind powerWind energy meteorologySince 2005 many turbine manufacturing leaders have opened U.S. facilities. Of the top 10 global manufacturers in 2007, seven - Vestas, GE Energy, Gamesa, Suzlon, Siemens, Acciona, and Nordex - have an American manufacturing presence. REpower is another manufacturer with notable usage in the United States. Plans for 30 new manufacturing facilities were announced in 2008, and the wind ind...

In 2023, an estimated 96% of newly installed, utility-scale solar PV and onshore wind capacity had lower generation costs than new coal and natural gas plants. ...

As the largest source of clean, renewable power generation in the United States and one of the fastest growing sources of new electricity supply, wind energy will play a large role in the nation's energy future.

Wind power generation in 23 years

Bonn (WWEA) - The year 2023 ended with a new record for new wind turbine installations: In total, the world added 116"065 Megawatt of new capacity within one year, more than ...
