Areas with great wind power potential such as Gansu are sometimes far away from established industrial and residential centers. Coal-fired plants have a constituency of miners and local governments which wind-power projects lack. This has led to power generated by wind remaining underused. Transmission capacity of the grid hasn't kept up with the growth of China's wind farms. In 2009, only 72% (8.94 GW) of China's total wind power capacity was connected to the grid. In 2014, 96.37 GW of ...

DOE/NREL and the State Power Corporation of China (SPCC) developed this pilot project, using a wind/diesel/battery system, to electrify 120 households on Xiao Qing Dao island located in the Yellow ...

In this paper, an open dataset consisting of data collected from on-site renewable energy stations, including six wind farms and eight solar stations in China, is provided.

The 13th Five-Year Plan established a goal of 210 GW of grid-connected wind power by 2020, including 5 GW of offshore wind. Provinces were given specific ...

Thus, through a Geographical Information System (GIS) based multi-criteria analysis, we assess the solar and wind energy potential in northwest China, quantitatively examine the energy ...

However, China still needs to turn the massive renewables buildup into power generation, replace fossil fuels, and reach the "tipping point" so as to ...

rising demands in consumption, in addition to generation energy imports play an important role in energy security. In the upstream power generation, the Huaneng Group, Huadian Power, Guodian Power, ...

On December 14, the CHN Energy 200 MW wind power project in Wuqia County, Xinjiang Uyghur Autonomous Region, successfully achieved full ...

Wind power generation in Northwest China Power Grid

China's installed wind capacity in the 570-580 GW range represents the nameplate capacity of turbines; actual yearly electricity produced depends on wind resources, curtailment and ...

This article comprehensively reviews the development status and prospects of wind power generation technology, covering the development process, cost trend analysis, and new application fields.
